Source: WCIS database, which uses National Council on Compensation Insurance (NCCI) codes as follows:

Specific Injury--no physical injury, amputation, angina pectoris, asphyxiation, burn, concussion, contusion, crushing, dislocation, electric shock, enucleation, foreign body, fracture, hearing loss or impairment, heat prostration, hernia, infection, inflammation, laceration, myocardial infarction, poisoning-general (not occupational disease or cumulative injury), puncture, rupture, severance, sprain, strain, syncope, vascular, vision loss and all other specific injuries, not otherwise classified (NOC).

Occupational Disease or Cumulative Injury--dust disease, NOC, asbestosis, black lung, byssinosis, silicosis, respiratory disorders, poisoning-chemical (other than metals), poisoning-metal, dermatitis, radiation, all other occupational disease or injury, NOC, loss of hearing, contagious disease, cancer, visual display terminal (VDT)-related diseases, mental stress, carpal tunnel syndrome, hepatitis losses and all other cumulative injury, NOC.

Multiple Injuries--multiple physical injuries only, and multiple physical injuries including both physical and psychological.

A significant amount of variation across years results from noncompliance and late reporting of claims. Data is based upon calendar year of injury. DWC believes that its database is representative of claims in California's workers' compensation (WC) industry for all years.
